

CLAIM AMENDMENTS

1 - 11. (canceled)

1 12. (currently amended) In combination with a power
2 track having a slot in which are exposed electrical conductors, an
3 adapter comprising:

4 a housing having an insert part fittable into the slot;
5 a shaft extending into the insert part and pivotal about
6 a shaft axis in the housing between a use position and a nonuse
7 position;

8 a one-piece conductive contact element rotationally fixed
9 to the shaft, having a contact projecting radially from the shaft
10 and engageable with one of the power-track conductors when the
11 insert part is fitted to the slot and the shaft is in the use
12 position, and having a one-piece plug-type terminal extending ge
13 nerally generally parallel to the axis;

14 means including formations unitarily formed with the
15 contact element and the shaft for axially and rotationally fixing
16 the contact element on the shaft; and

17 a hookup wire provided with another plug-type terminal
18 mated with the ~~contact-element~~ terminal of the contact element.

1 13. (previously presented) The power-track adapter
2 defined in claim 12 wherein the contact is unitarily formed with
3 the contact element.

1 14. (previously presented) The power-track adapter
2 defined in claim 13 wherein the contact element is formed as a
3 spring urging the contact radially outward.

1 15. (previously presented) The power-track adapter
2 defined in claim 12 wherein the control shaft is at least partially
3 hollow.

1 16. (previously presented) The power-track adapter
2 defined in claim 15 wherein the control shaft is formed with a
3 throughgoing passage, the adapter further comprising
4 another feed wire extending through the passage.

1 17. (currently amended) The power-track adapter defined
2 in claim 12, further comprising

3 a second shaft separate from the first-mentioned shaft,
4 extending into the insert part, and pivotal about a second shaft
5 axis in the housing between a use position and a nonuse position;

6 a second conductive contact element separate from the
7 first-mentioned contact element, rotationally fixed to the second
8 shaft, having a contact projecting radially from the second shaft,
9 and engageable with another of the power-track conductors when the
10 insert part is fitted to the slot and the second shaft is in the
11 use position, and having a one-piece plug-type terminal extending
12 generally parallel to the axis of the second shaft; and

13 a second hookup wire separate from the first-mentioned
14 hookup wire and provided with a plug-type terminal mated with the
15 ~~second contact element~~ terminal of the second contact element.

1 18. (currently amended) The power-track adapter defined
2 in claim 18 wherein the ~~[[other]]~~ plug-type terminal of the hookup
3 wire is displaceable axially in the housing for connection with and
4 disconnection from the ~~contact element~~ terminal of the contact
5 element.

6 19. (currently amended) In combination with a power
7 track having a slot in which are exposed electrical conductors, an
8 adapter comprising:

9 a housing having an insert part fittable into the slot;

10 a shaft extending into the insert part and pivotal about
11 a shaft axis in the housing between a use position and a nonuse
12 position

13 a conductive contact element rotationally and axially
14 fixed to the shaft, having a contact projecting radially from the
15 shaft and engageable with one of the power-track conductors when
16 the insert part is fitted to the slot and the shaft is in the use
17 position, and having a one-piece plug-type terminal extending
18 generally parallel to the axis; and

19 a hookup wire provided with another plug-type terminal
20 mated with the ~~contact-element~~ terminal of the contact element and
21 displaceable generally parallel to the axis between a position
22 interfitting with and electrically coupled to the terminal of the
23 contact element and a position disconnected therefrom.

1 20. (currently amended) In combination with a power
2 track having a slot in which are exposed electrical conductors, an
3 adapter comprising:

4 a housing having an insert part fittable into the slot;
5 a one-piece shaft extending into the insert part and
6 pivotal about a shaft axis in the housing between a use position
7 and a nonuse position;

8 a conductive contact element rotationally fixed to the
9 shaft, having a contact projecting radially from the shaft and
10 engageable with one of the power-track conductors when the insert
11 part is fitted to the slot and the shaft is in the use position,
12 and having a one-piece tongue-shaped plug-type terminal extending
13 generally parallel to the axis; and

14 a hookup wire provided with a plug-type terminal mated
15 with the ~~contact-element~~ terminal of the contact element.
